

MindCube

Mathematics is the colouring pencils in the foundation of a school career. Today's children are tomorrow's adults and that's why it's important for every child to practice, but also enjoy Maths. **MindCube** definitely succeeds in teaching children in a playful way so that children like it and are curious to learn more about Mathematics. **MindCube** 'minus' bad days, 'multiply' knowledge, 'plus' add a phantasmagorical experience and it creates a love of Math that everyone shares.

MindCube has made my brain fit and it benefits me in my daily life in various situations and events. I learned how to think one step further and not just do it. I discovered and experienced a lot and broadened my field of knowledge. **MindCube** has added to build a lot on my self-esteem, attentiveness, perceptual skills, logical reasoning and many more. I'm only a few months with **MindCube**, but have a lifetime of memories.

One cannot make fire without wood, so I feel that one cannot be successful in Mathematics if your foundation is not strong enough. "*Think twice and write once.*" These familiar words from "Oom Jaco" are a life changer, because I also use them in many other subjects and even in my personal life, as I learn to think something through before I do it.

Positivity is rooted between the **MindCube** walls. A great love for Mathematics is cultivated and later we flourish from good knowledge that leads to wisdom. It's not one or two features that makes **MindCube** so incredibly unique, but hundreds of aspects of it that makes me recommend it to any child, whether they're struggling with Maths or not.

Mathematics teaches us that there is a solution to every problem and to keep going until you get something right, so it also teaches us to always be careful of "the signs". Never say "*I cannot*", say "*I will try!*" Remember that mistakes teach one and allows one to think outside the box.

Make Mathematics a part of your life and use it. Be thankful for the gift that you can learn, think, listen and have the ability to work.

Count every day, because every day counts!
